Project: MAY12-21

Week: September 11 - 17
Adviser: Manimaran Govindarasu

• Accomplishments of past week
  - Interacted with software and hardware we will be using throughout the semesters
  - Met with our grad students and got an overview of the equipment
  - FINALLY got the group email setup
  - Read through previous senior design semesters pertaining to our project
  - Read a paper prepared by fellow teammate (grad student) that gave a broad description of the project
  - Started to develop high level goals on where we would like the project to go over the next year

• Plan for coming week
  - Continue to develop details relating to our high level goals
  - Get more familiar with the equipment in the labs
  - Begin to develop a plan to what and where contributions can lie so we can meet the high level goals of the whole team (including grad students).
• Pending issues

- Using the technology in the lab

- Details pertaining to both the goals of our Senior Design group and the goals of the graduate students we are working with

- Getting a better understanding of how the technology in the lab works together (this will come with use)

• Individual contributions – identify specific tasks accomplished

- Again, its too early to say where individual contributions are, but the group had two group meetings last week to get caught up and each member was present. Right now we are making an effort to help this project in the right direction.
