Project: MAY12-21

Week: September 18 - 24

Adviser: Manimaran Govindarasu

• Accomplishments of past week
  - Interacted with software and hardware we will be using throughout the semesters
  - Met with our grad students and saw a demonstration of different units working together
  - Read through documents supplied to us by the grad students to help us interact with the software
  - Continued to develop high level goals for our project
  - Started to put project plan together that is due this week

• Plan for coming week
  - Continue to develop details relating to our high level goals
  - Get more familiar with the equipment in the labs
- Finish up our project plan due for Thursday
- Start looking into the finer details of our Project (approaches that have been taken and approaches that need to be taken)
- Discover what tactics have been used in the past to infiltrate the system.
- Research what all goes into bringing our system up to a 30 bus system

• Pending issues
- Using the technology in the lab
- Finish project plan and use the ideas and information to form a schedule for the semester

• Individual contributions – identify specific tasks accomplished
- All group work still, but this is the last week. We will probably start branching off now
