

11/11/2012

Weekly Report 11/5 - 11/11

Group: 13-17

Advisor: Prof. Somani

Client: Josh Mandich/ Venture Lights

Accomplishments:

- Discussed network authentication issues
- Finished 2nd draft of project plan

Plan for the coming week:

- Eric: Look at C sockets authentication, SSL between Java and C
- Michael: Work on bash script to run when motion detection software completes, work on integrating with other code. Talk to Eric about storing logs in MySQL database
- James: More research on Java sockets authentication, continue working on distinguishing clients
- Intae: Continue looking at testing options, research PCB options
- David: Continue working on discarding non-license plate objects from images

Pending Issues:

- Should start looking at senior design presentation
- Work on Homework 4
- Meeting with Josh tomorrow to discuss progress

Individual Contributions:

- Eric: Looked at authentication, data translation between C and Java is working
- Michael: Could not attend meeting
- James: Looked at authentication, distinguishing clients. Will have a list of clients, connected devices need to provide info to verify which client they are
- David: Worked on refining license plate localization, looking at ways to determine which objects are license plates
- Intae: Met with Josh, talked about PCB options to use in the future
