Write more detail report

This week we began integrating the different components of our project together, so we will have something to present during our final presentation during dead week. We also drafted and submitted our design document. In the coming week, we will start testing the IR sensor we will be using for proximity sensing, and we will finish integrating our hardware and software together. By the end of the week, we should be able to send basic messages to the Arduino and make the motor spin and the LEDs light up. We will also revise our project plan this week.
